

ABSTRACT

"Device for cleaning interdental spaces"

The invention relates to a device for cleaning interdental spaces.
It comprises:

- a tubular guide element having a first profiled open end to allow its positioning at the entry to an interdental space;
- cleaning means mounted movably in said tubular element, fixed to a first end of the support means ;
- support means for the cleaning means having a fixed longitudinal direction relative to the axis of the tubular guide element; and
- gripping means for moving the cleaning means between a first position, in which they are entirely arranged inside the tubular element, and a second position, in which they are arranged entirely outside the first end of the tubular element.
